Dispatcher Command Center

Dispatchers and Resource Officers who have PanicAPP calls routed to them through the mobile application have instant access to crucial information, providing them with a clear picture of events. In addition to streaming live audio and video at the scene, the PanicAPP system provides dispatchers with the caller's personal details, pinpoint GPS location and reliable map routing to guide the responder directly to the caller. These details are an essential part of prioritizing calls for service and resource allocation.

PanicAPP for iOS and Android

PanicAPP is the most comprehensive personal safety app on the market. With the push of a button, PanicAPP starts streaming the audio and video from your phone to emergency services. You have the ability to choose the service dispatch or stream to all service dispatchers. This allows the authorities to watch the situation as it unfolds and allows you a two-way conversation just like a regular phone call. Responding units are immediately directed to the user's GPS location. With only 2 clicks, emergency personnel are able to see a live video from a mobile device, hear the audio surrounding the event and instantly activate the right response.

Video Stream

Chat with Dispatcher

With PanicAPP, you can take comfort in knowing help is only a click away!

PanicAPP's technology allows users to be easily located and ensures they will get the help they need faster than ever before.

PANICAPP

What is PanicAPP?

PanicAPP is a real-time emergency communication platform, streaming live audio and video directly to first responders, school resource officers and administrators in real time – with *NO* delays.

PanicAPP has revolutionized how emergency services are able to respond to crimes, fires, accidents and any type of emergency situation. Now you can rest easy knowing you have real-time communication with authorities at any time, day or night.

Features

- **PanicAPP** allows any smart-phone device to transform into an enhanced **panic call**.
- Easily connect the streaming live audio and video directly to emergency services along with the exact GPS location, and the ability to discreetly text with first responders.
- **Teacher to Teacher** – All the teacher has to do is press the app and instantly stream the live audio and video directly to emergency services, the school nurse, the principal, security or even the child's parents. The incident is recorded and logged into the child's profile.
- Select the proper authority to stream your audio and video live to the dispatcher.
- View the officer's location on your phone so you know how close the officer is.
- In a desperate situation, you have the ability to chat with the dispatcher so sound will **NOT** be heard. This allows you to stay hidden and remain in contact with the dispatcher at all times.
- **PanicAPP** platform extends command and control coverage into the field. Dispatch operators and managers can see an event in real-time and provide responding resources.
- By receiving a clearer picture from the field in seconds, dispatchers, managers and supervisors can deploy the appropriate response much faster than a 911 call.
- In addition to live video at the scene of critical events, the **PanicAPP** system provides dispatchers with the victim's personal details to accurately access any medical conditions.

Industries We Service

EDUCATION • NURSING • REAL ESTATE

Crime On Campus

Every year, parents send their kids off to college with the expectation that they will be receiving their education in a safe environment. However, the reality is that college can be a dangerous place. Campus crime is a serious issue even at the top schools.

Are you enrolled in or have a son or daughter attending a U.S. college? Have you seen the campus crime reports for your school? With **PanicAPP**, you can sleep well at night knowing your child has the most effective real-time security app on their phone. With a couple of clicks, PanicAPP instantly notifies the campus and local police and streams the video and audio to the dispatcher.

Violence in health care is increasing

Violence in health care settings is in some ways unavoidable. Nurses and doctors must deal with patients who are in emotionally volatile situations; cognitive deficits also may lead some patients to lash out. When you are walking to your vehicle at night, a perpetrator can lurk in the shadows and wait until you are alone. That's when they attack.

We developed PanicAPP to help fight the violent crimes against nurses. With **PanicAPP**, you only have to click the panic button and your GPS location, along with streaming video and audio, is instantly displayed to the hospital security dispatcher and the local police. Now help can be deployed instantly without going through any third parties.

Crime against Real Estate Agents is growing

Real estate is sometimes a dangerous occupation...especially if you are alone in a model home in a new subdivision, hosting an open house or showing properties to unknown prospects.

Given the wrong circumstances at the wrong time, it can be downright deadly. The **PanicAPP** mobile app connects to the police or emergency services with the click of a button. Now, when you activate the panic button, the police will instantly receive the live streaming video and audio from your smartphone. They also will know immediately your GPS location and have two-way communications going on with you in real time.

With PanicAPP, you can take comfort in knowing help is only a click away!
